Cash and runway

Cash at quarter end: SGD 32.4M. Monthly cash burn averaged SGD 1.8M in Q1 (Q4 2025: 1.8M). At current burn, runway is 18 months. The board has previously discussed maintaining a 12-month runway floor at all times; we remain comfortably above floor. Working capital: receivables increased SGD 0.9M as a small number of enterprise accounts went from net-30 to net-60 in Q1. AR days outstanding are 41 (Q4: 37). Aisha Mahmud and Kelly Tan tracking.

Forward look - Q2 commentary

April month-to-date revenue is SGD 4.1M. Internal pacing implies a Q2 forecast in the range of SGD 12.6M-13.4M against a 17.0M Q2 plan. SEA pipeline coverage is healthy (2.6x); Brasil pipeline coverage is 1.4x. A revised Q2 target proposal will be brought to the May 12 board meeting; in parallel, the Confluence platform program is being re-baselined and is expected to slip from end-of-Q2 to end-of-Q3, which has implications for the Codos engagement timing.
